SUMMARY

Computer Science undergraduate specializing in Data Science and AI (expected graduation 2027), focused on designing AI services, APIs, and microservices that turn data-driven applications into real-world software solutions. Currently building projects around AI agents and data management to make learning and up-skilling more accessible, with hands-on, production-level experience.

SKILLS

Languages: Python, JavaScript, C++, C, SQL

Technologies: OpenAI GPT-3.5, Google GenAI, Prompt Engineering, LangChain, FastAPI, Node.js, Express, ReactJS, MERN, PostgreSQL, MongoDB, AWS, Docker, Git, GitHub, REST API Design

INTERNSHIP / WORK EXPERIENCE

Trogon Media Pvt Ltd — Calicut, Kerala Jun 2025 – Dec 2025 (6 months)

AI / Generative AI Developer Intern

- **MCQ Extractor API:** Built a FastAPI + Google GenAI service to auto-extract MCQs from PDF study material for an ed-tech platform serving UPSC/PSC exam aspirants, scaling to 5+ clients and 1,000+ users while eliminating manual question transcription for their content team.
- Improved extraction accuracy from an initial 40% to a validated 99.5%, tested across 100+ PDFs (100+ pages each) through iterative refinement.
- Estimated 400+ hours of manual transcription work eliminated, based on average professional data-entry typing speed.
- Implemented an asynchronous background-task pipeline (per team architecture) to process large PDF uploads with real-time status updates.
- **Developed SpeekiTalk AI:** a spoken-English conversational assistant using OpenAI GPT-3.5, Deepgram Nova-3 and Azure API for adaptive conversations, live transcription, and feedback — scaled to 10K+ users.
- Independently deployed and maintained both services (MCQ Extractor API, SpeekiTalk) as standalone microservices, owning full server setup and upkeep.

PROJECTS

Speak Like CEO — AI-Powered Speech Generation & Public Speaking Platform

AI Engineering / Product Development Project

- Architected an AI-powered speech-coaching platform converting inputs (topic, duration, audience, language, tone) into structured speeches via a 5-stage pipeline — Generate → Listen → Shadow → Recall → Perform — combining LLM-based generation, TTS, and audio-intelligence scoring (pace, pronunciation, clarity).
- Designed personalization for 3 user segments (children, students, professionals) and a feedback loop tracking performance over time to enable iterative improvement.
- Defined an MVP spanning ~170 screens/states (40 high-fidelity frames) with a multilingual architecture (launch: Malayalam, English; roadmap: Hindi, Tamil, Telugu, Kannada) grounded in learning-science principles like shadowing and spaced repetition.

Multilingual NCERT Study-Material Generator

Personal Project

- Engineered a pipeline to fetch NCERT / Indian school textbook chapters across 6 languages (English, Hindi, Tamil, Arabic, Malayalam, Urdu) with 100% extraction accuracy.
- Used GenAI APIs to auto-generate chapter summaries, key-topic breakdowns, and likely exam questions for each chapter.

ACHIEVEMENTS

- Strong foundation in Data Structures & Algorithms (C++) with 150+ problems solved on LeetCode.

EDUCATION

ITM Skills University, Navi Mumbai — B.Tech in Computer Science (AI & DS)

2023 – Present

- CGPA: 9 (TY) • Expected Graduation: 2027

CERTIFICATIONS

- HackerRank SQL
- HackerRank Software Engineer Intern
- HackerRank Python

LANGUAGES:

- English (Fluent) • Hindi (Fluent) • Malayalam (Native) • Arabic (Elementary) • Italian (Beginner)

INTERESTS:

- Hackathons • Competitive coding • Football • Exploring Languages
